Resume Status	Needs Improvement

MATCHING SKILLS

- Python
- Machine Learning
- SQL

MISSING SKILLS

- Communication Skills
- Pandas
- NumPy
- Scikit-learn
- Power BI

STRENGTHS

- Strong academic background with a high CGPA in Computer Science Engineering (AIML).
- Solid foundation in core AI/ML concepts and languages (Python, SQL, Deep Learning, Computer Vision, Generative AI).
- Proactive learning demonstrated through relevant certifications from reputable platforms (Coursera, IBM, PW Skills, Internshala).
- Eagerness to contribute and continuous learning highlighted in the objective.
- Extracurricular activities and leadership roles suggest teamwork and organizational skills.

WEAKNESSES

- The 'Projects' section lists non-technical extracurricular activities rather than technical data science projects, which is crucial for a technical role.

- Lack of explicit mention or demonstrated experience with key data manipulation and machine learning libraries (Pandas, NumPy, Scikit-learn).
- Absence of experience with data visualization tools like Power BI.
- The required skill 'Communication Skills' is not explicitly addressed or demonstrated through specific professional examples.

SUGGESTIONS

- Develop and showcase a dedicated 'Technical Projects' section detailing data science projects where you've applied Python, SQL, Machine Learning, and ideally incorporated Pandas, NumPy, and Scikit-learn.
- Gain practical experience with data visualization tools like Power BI and include them in your skills.
- Explicitly highlight 'Communication Skills' by providing examples within project descriptions or an 'Experience' section where you had to convey technical insights to others.
- Quantify the impact and results of your technical projects and describe the specific technologies used.
- Consider adding a summary or 'About Me' section that concisely highlights your key technical skills and career aspirations relevant to a Data Scientist role.

INTERVIEW QUESTIONS

- Could you describe a challenging data analysis or machine learning project you've worked on, detailing the tools and methodologies you used from start to finish?
- How do you approach explaining complex technical concepts to non-technical stakeholders or team members?
- The job description mentions Pandas, NumPy, and Scikit-learn. Can you share your experience or understanding of these libraries and how you would use them in a typical data science workflow?
- What experience do you have with data visualization, and which tools have you found most effective for presenting insights?
- Given your certifications in Machine Learning and Generative AI, what is a recent trend or development in AI that particularly interests you, and how do you stay updated with new technologies?
